|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| I5 | <p><b>Target:</b> Alt text does not communicate image's purpose</p> <p><b>Cause:</b> "image123" - no description</p> <p><b>Correction:</b> Gave alt text more description - "Green saguaro cactus stands in yellow desert sand, orange sunset in the sky, 2D graphics, simple and calm environment"</p> <p><b>Evidence:</b><br/> <a href="https://developer.mozilla.org/en-US/docs/Web/API/HTMLImageElement/alt">https://developer.mozilla.org/en-US/docs/Web/API/HTMLImageElement/alt</a> HTML Image Element: alt property</p> <p><b>Verification:</b> Tested alt text by deleting a letter from image link - showed alt text in place of the image on browser view</p> |
| R1 | <p><b>Target:</b> CSS stylesheet not linked to resource page</p> <p><b>Cause:</b> Resource page is below CSS and Image folder</p> <p><b>Correction:</b> Add .. before /css/styles.css to move link up to correct folder</p> <p><b>Evidence:</b><br/> <a href="https://developer.mozilla.org/en-US/docs/Learn_web_development/Core/Structuring_content/Creating_links">https://developer.mozilla.org/en-US/docs/Learn_web_development/Core/Structuring_content/Creating_links</a> Creating Links, #moving back up into parent directions</p> <p><b>Verification:</b> Browser view now shows CSS style in resources page</p>                                               |
| R2 | <p><b>Target:</b> Site headers do not link to correct pages</p> <p><b>Cause:</b> Resource page is outside index.html folder</p> <p><b>Correction:</b> Add .. before index.html in both return link headers</p> <p><b>Evidence:</b><br/> <a href="https://developer.mozilla.org/en-US/docs/Learn_web_development/Core/Structuring_content/Creating_links">https://developer.mozilla.org/en-US/docs/Learn_web_development/Core/Structuring_content/Creating_links</a> Creating Links, #moving back up into parent directions</p> <p><b>Verification:</b> Browser view and code pages go back to index.html instead of failing</p>                                          |
| C1 | <p><b>Target:</b> Keyboard users - no focus rule</p> <p><b>Cause:</b> No outline in a:focus rule</p> <p><b>Correction:</b> Add outline attributes - solid and color</p> <p><b>Evidence:</b><br/> <a href="https://developer.mozilla.org/en-US/docs/Web/CSS/Reference/Selectors/:focus">https://developer.mozilla.org/en-US/docs/Web/CSS/Reference/Selectors/:focus</a> :focus CSS pseudo-class</p> <p><b>Verification:</b> Pressed tab in browser view, all focus attributes had a solid outline with correct color</p>                                                                                                                                                  |
| C2 | <p><b>Target:</b> fixed dimension</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|    | <p><i>Cause:</i> .siteheader, main, and footer have fixed width of 1200px</p> <p><i>Correction:</i> change to max-width: 1200px</p> <p><i>Evidence:</i></p> <p><a href="https://developer.mozilla.org/en-US/docs/Learn_web_development/Core/Styling_basics/Sizing">https://developer.mozilla.org/en-US/docs/Learn_web_development/Core/Styling_basics/Sizing</a> Sizing items in CSS</p> <p><i>Verification:</i> Content can still be seen when changing viewport size on browser</p>                 |
| C3 | <p><i>Target:</i> Card grid - overflow</p> <p><i>Cause:</i> fixed card width</p> <p><i>Correction:</i> change card width to be repeat(3, 1fr) for auto responsiveness</p> <p><i>Evidence:</i></p> <p><a href="https://developer.mozilla.org/en-US/docs/Web/CSS/Reference/Properties/grid-template-columns">https://developer.mozilla.org/en-US/docs/Web/CSS/Reference/Properties/grid-template-columns</a> #fr</p> <p><i>Verification:</i> Cards moved to no overflow in browser</p>                  |
| C4 | <p><i>Target:</i> card specificity</p> <p><i>Cause:</i> selector strategy</p> <p><i>Correction:</i> use #featured-card attribute for a higher selector</p> <p><i>Evidence:</i></p> <p><a href="https://developer.mozilla.org/en-US/docs/Web/CSS/Guides/Cascade/Specificity">https://developer.mozilla.org/en-US/docs/Web/CSS/Guides/Cascade/Specificity</a> specificity, #how is specificity calculated, #ID column</p> <p><i>Verification:</i> featured card is different color than other cards</p> |
| C5 | <p><i>Target:</i> media query min-max width</p> <p><i>Cause:</i> Minimum width is bigger than the maximum width</p> <p><i>Correction:</i> switch to (max-width: 500px)</p> <p><i>Evidence:</i> Readiness check: foundations tools question 9</p> <p><i>Verification:</i> Moving page width in browser</p>                                                                                                                                                                                             |

### Code defense:

### Folder organization

Problems: CSS was not connecting to resources, resources was not connecting to home page, files were not opening on internet browser, etc

— Organizing the files in Visual Studio with correct link connections to each one made a large difference in the site. Specifically, linking CSS to resources by adding the folder

CSS to styles.css href in the resources page (css/styles.css) allowed the CSS to be added to the resources page. This way, the entire website, including the different pages, was connected to CSS and had a cohesive style and organization.
